Workforce Sustainability*

June 17 – 19, 2024

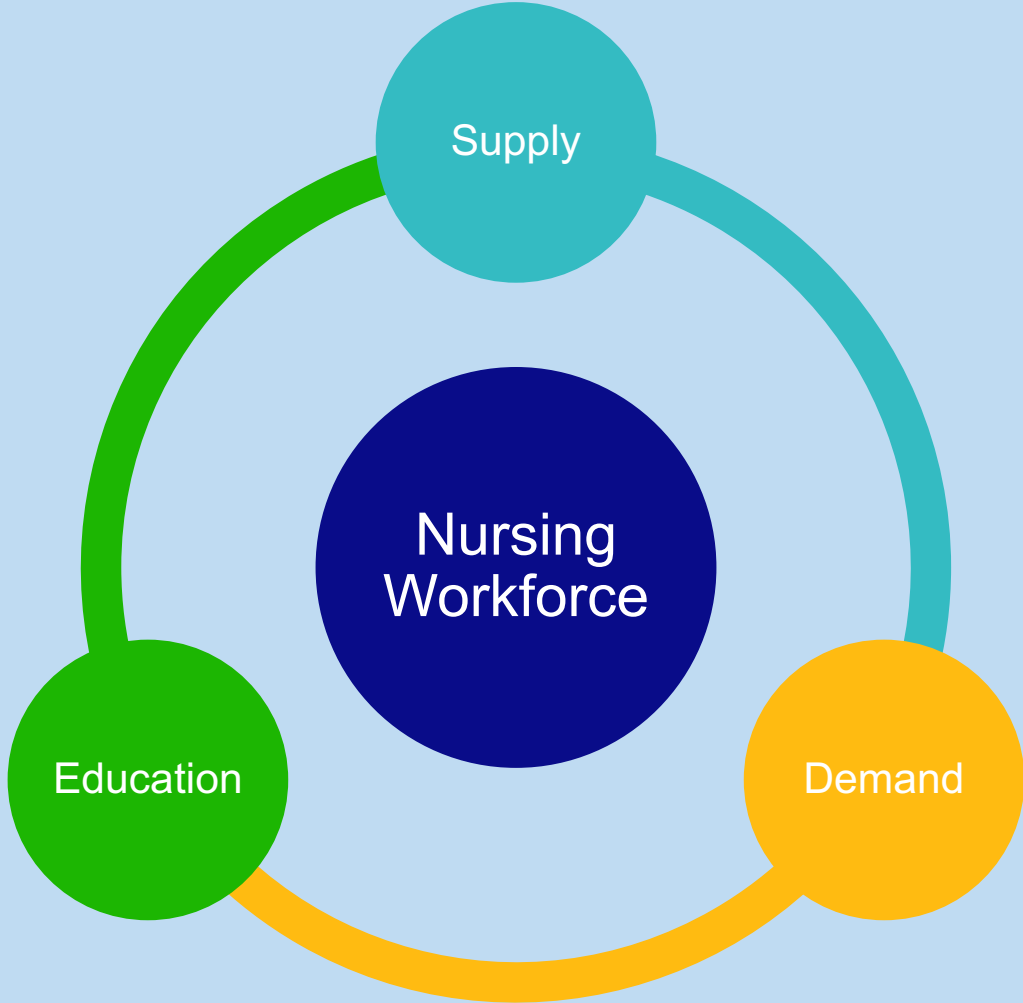

Today's Goals

- Define the Forum's Minimum Dataset (MDS) and review a brief history of how it has evolved
- Describe the major revisions proposed to the MDS
- Detail the importance of measuring variables related to wellbeing
- Determine how the MDS can be used by states to leverage better access to or collection of supply data

Slido Poll #1:

Do you have access to the nursing workforce data in your state?

Reminder: The Complete Data Picture

Background

- The minimum datasets developed by the National Forum establish the recommended minimum data points each state should collect to measure the status of their nursing workforce.
- The first MDS was made available in 2009.

Background

- **The two key goals of the MDS:**
 1. Guide collection of nursing workforce data at the state level
 2. Standardize key variables to allow comparability of data
- You can access the Supply Data MDS from 2016 here:
https://nursingworkforcecenters.org/wp-content/uploads/2021/12/National-Forum-Supply-Minimum-Dataset_September-2016-1.pdf
- The revised 2024 Supply MDS will be available on the National Forum's website before the end of the year.

Access to Nursing Supply Data

- Generally, the nursing supply data for a state is captured during license renewal cycles from all licensed nurses (LPN/LVN, RN, APRN).
- Ideally, states would also capture this information at the time of initial licensure.
- Depending on the state, researchers may gain access to this data through the Nursys e-Notify system, the license renewal survey, and/or by working with key stakeholders like the nursing regulatory body or the Department of Public Health within your state.

Aspirations vs. Reality

- **For states that don't have the MDS data on their active nurses:**
 - Recommendations for collecting data as often as possible
 - The Essential Elements – priority variables if a state can't collect the entire MDS
- As states adopt the National Forum's MDS, it ensures we are all capturing key data on our nursing workforce in a way that lends itself to further analysis and comparison.

Slido Poll #2:

Do you know if your state is using the National Forum's MDS as the basis for your workforce supply data?

What question are
you trying to answer?

Variable Specific Guidance

Suggestions for aligning your questions to the MDS while getting the data that's important to you.

Variable Specific Guidance

Employment Location

Example question:

Where is your primary place of nursing employment located?

Variable Specific Guidance

a.[State]

b.Other U.S. State or Territory

c.Foreign Country

Variable Specific Guidance

- **Data should be collected at the smallest geographic area of interest (e.g., region, county/parish, zip code, etc.).**

Variable Revisions

Changes to variables
already on the MDS.

Variable Revisions

Race

- American Indian or Alaska Native
- Asian
- Black or African American
- Native Hawaiian or Other Pacific Islander
- White
- Race Not Listed Here

Variable Revisions

Race

- American Indian or Alaska Native
- Asian
- Black or African American
- Hispanic or Latino
- Middle Eastern or North African
- Native Hawaiian or Other Pacific Islander
- White
- Race Not Listed Here
- Prefer Not to Answer

New Variables

Additions to the MDS to address contemporary workforce issues.

New Variables

Interstate
Workforce

Multistate Licensure

Primary Residential
Location

Travel Nurse

Telehealth

New Variables

Workforce
Retention

Intention to Leave
Workforce in 1 Year

Direct Patient Care Role

Nursing Student Loan
Debt

Nurse Wellbeing

Measuring Wellbeing

Nurse wellness is an issue and needs to be a priority:

Nurse wellness is an issue and needs to be a priority:

Wellness by the Numbers

Stress & Burnout

In 2023¹:

66% of nurses felt Stressed

43% of nurses felt Burnt Out

Workplace Violence

82% workplace violence²

Workplace Injury

85,540 non-fatal occupational injuries and illnesses resulting in inability to perform work 2021-2022, increase 6% from 2018-2020³

Incivility

25% experienced incivility

30% witnessed incivility⁴

Job Satisfaction

80% are extremely (28) or moderately (52), satisfied with their jobs, 9% decrease from 2018

Dissatisfaction increased 9%⁵

Trafficking & Exploitation

Labor trafficking in healthcare rose by 63% between 2020 and 2021⁶

Highest numbers of trafficking cases identified California (13%), Florida (8%), Texas (9%)⁷

Leveraging the MDS: A Case Study from Massachusetts

- In 2022, the NCWS was formed to make recommendations to the state on how to strategically grow the nursing workforce.
- Realizing the state had not published supply data on the RN/LPN workforce since 2014-15, it provided the NCWS an opportunity to advocate for the release of the most recent survey data & revise the survey to collect better data.
- The NCWS Data & Research committee met with key stakeholders from the Board of Registration in Nursing, the Health Policy Commission, the Department of Public Health and dozens of other workforce experts to identify what data was collected in our existing survey and what we would need to add.

Leveraging the MDS: A Case Study from Massachusetts

- Using the MDS as the basis for our revisions, this group of subject matter experts met for several months and finetuned the survey, adding questions pertaining to key policy issues from our state
 - Proposed additions included things on traveling, precepting, burnout
- For states newer to this journey: Start by establishing what data is collected and are you using the MDS as the basis for that data. Then you can identify how frequently the data is collected and who has access to and ownership of the data.
- As you understand the data you have, then you can work with the owners of the data to modify it based upon state's nursing workforce priorities.

Public Comment

We are looking for states to review the proposed changes to the MDS & share your feedback via our online survey:
